## INTRODUCCIÓN

En México, como en cualquier otro país en que se desarrollan pesquerías, es necesario contar con medidas administrativas que promuevan la explotación sustentable de los recursos en el marco de la pesca responsable. La instrumentación de esas medidas se debe realizar considerando las diferentes fuentes de información involucradas en el complejo sistema bio-tecnosocioeconómico que forman las pesquerías (Kesteven, 1973).

En este sentido, el análisis de estadísticas pesqueras básicas, como la captura y el esfuerzo de pesca, constituyen los pilares de la evaluación de pesquerías y en los últimos años se ha reconocido que no sólo es importante saber cuánto y cuándo, sino también determinar dónde y cómo (Hilborn y Walters, 1992). Esta información es necesaria para conocer la dinámica de los recursos y de la flota y constituye la base para la instrumentación de modelos matemáticos que permitan evaluar efectos de la pesca sobre recursos específicos y sobre las comunidades marinas (Pauly et al., 2000). Además, es indispensable para el desarrollo de sistemas geográficos de información, herramienta utilizada para analizar aspectos demográficos de la comunidad, cuya aplicación se está generalizando en el campo de las ciencias marinas (Bauman, 2003; Sinclair, 2003).

En México la recolección de estadísticas pesqueras se efectúa a través del Sistema de Captura de Avisos de Arribo y Cosecha en Línea (SIPESCA) de la Comisión Nacional de Acuacultura y Pesca (CONAPESCA). Los pescadores registran información sobre su actividad en las oficinas de pesca de la Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA), en formatos conocidos como avisos de arribo,

avisos de cosecha y avisos de producción. La información, además de la fecha y lugar en que se efectúa el registro, incluye lo relacionado con la captura por especie o grupo de especies, por lugar de pesca y desembarque, y es la base de los anuarios estadísticos de pesca y de los informes técnicos en los cuales se apoyan las autoridades pesqueras para la toma de decisiones.

Sin embargo, el uso de la información es parcial en lo relacionado con la definición de áreas de pesca y unidades funcionales de manejo, especialmente en el campo de las pesquerías artesanales o de pequeña escala, donde los avisos de arribo constituyen en la mayoría de los casos la única fuente de información. En pesquerías industriales, como las de atún, sardina o camarón de alta mar, además de los “avisos de arribo”, se utilizan bitácoras de pesca y en algunos casos, programas de técnicos científicos observadores a bordo.

El “Atlas de Localidades Pesqueras en México”, es un documento que en forma de libros por Estado o región de México, permite localizar los lugares de pesca y desembarque determinados por la CONAPESCA, incluyendo las claves de cada lugar para facilitar su uso por los oficinistas de pesca.

La base de datos fue complementada con información sobre latitud y longitud geográfica para cada lugar de pesca o desembarque registrado en los “avisos de arribo” y con la posición de otros lugares de interés geográfico (puntas, bajos, ensenadas) que sirven de guía al usuario y que pudieran ser considerados en las listas oficiales. Los lugares incluidos en el cada libro del Atlas fueron ordenados de acuerdo a su posición geográfica y se identificaron con un número progresivo o clave SIMAVI, acrónimo utilizado para el Sistema Automatizado para el Manejo de Avisos de Arribo, programa para microcomputadora que elaboró el CICIMAR-IPN (Ramírez-Rodríguez y Hernández Herrera, 1999).

Para lo anterior se utilizaron cartas y mapas editados por la Secretaría de Marina, la Secretaría de Comunicaciones y Transportes, el Instituto Nacional de Estadística, Geografía e Informática (INEGI), el Instituto Nacional de Geografía de la Universidad Nacional Autónoma de México, almanaques topográficos y cartas de pesca. Las bases cartográficas se integraron en un sistema de información geográfico utilizando el programa Mapinfo 7.5.

Cada libro del Atlas contiene una serie de mapas organizados de norte a sur y de oeste a este según la región que se trate, incluyendo el litoral, islas y cuerpos interiores. Para facilitar el uso se incluye un mapa guía en el que aparecen las subdivisiones o recuadros. Al pie de cada mapa se presenta en una tabla el listado de nombres de las localidades pesqueras, con sus correspondientes claves SIMAVI, y CONAPESCA para lugar de pesca o desembarque. Para las localidades consideradas por el Consejo Nacional de Población se incluyó la clave propuesta por esa institución (clave CONAPO). En cada libro se presenta un índice de nombres de localidades pesqueras ordenadas por la clave SIMAVI y otro en que se ordenan alfabéticamente y se incluyen las coordenadas de la posición geográfica de cada sitio y el número de mapa en que se encuentran.
